

SKSCRIPT Manual

Version 1.0

Installation

1. Install phantomjs (<http://phantomjs.org/download.html>)
2. Get a copy of SKSCRIPT

Operation

The script has following options:

[startTime] - from what time of day appointments are accepted (required)

Example: "8:10 AM"

[endTime] - till what time of day appointments are accepted (required)

Example: "8:10 PM"

[startDate] - from what day appointments are accepted

Example: "May 1, 2017"

[endDate] - till what day appointments are accepted

Example: "Jul 30, 2017"

To use start the script:

1. Open folder with the script in Terminal
2. Type the following and press enter to start
phantomjs cronos.js [startTime] [endTime] [startDate] [endDate]
3. Keep terminal window open for the duration of script run

To stop the script

1. Focus on terminal window where the script is running
2. Enter CNTRL+X to stop the script

Important notes

In the event of Cronos changing their pages' layout in places that the script relies on the script will not work until updated.
